

A pilgrimage planner that adapts

Nine required temples. One to three days. A route that respects opening hours, family pace, and ritual commitments.

THE PRODUCT RULE

All nine are mandatory in a complete circuit.

If the requested trip cannot fit, explain the conflict and offer adjustments. Never remove a temple silently. Optional shrines are added only when there is time.

A family plans, travels, and adapts

Example: A family starts in Kumbakonam, travels by car for two days, and wants basic darshan at all nine temples.

HUMAN MOMENT

“We spent 90 minutes longer at Vaitheeswarankoil. Can we still reach the remaining temples before they close?”

How the route is decided

Feasibility comes before shorter driving time. The engine preserves hard commitments and explains failures.

Build the smallest complete experience

Start with trusted temple records and a working trip. Add prediction only after collecting enough actual visit data.

01 Temple data

Nine profiles, sources, hours, entrance and parking confidence.

02 Trip setup

Dates, origin, duration, pace, meals, access and ritual locks.

03 Planner

Road matrix, schedule evaluation, feasible order, conflict reasons.

04 Trip view

Map, day timeline, edit/lock, navigation, contact details.

05 On-trip mode

Complete a stop, record delay, replan, sync offline events.

FIRST RELEASE CHECK All nine accounted for; hours respected; uncertainty visible; delay replanning works.
